

WAI YAN MIN MIN (ZACK)

Full-Stack AI Developer | LLM Applications & Scalable Systems

Singapore | +65 9136 6148

LinkedIn | GitHub | Portfolio | Stack Overflow

Full-Stack AI Developer who builds end-to-end products spanning LLM apps, RAG pipelines, and agent workflows through production-ready web/mobile UIs, APIs, and cloud infrastructure. Experienced shipping AI-powered features with FastAPI, LangChain, Next.js, and AWS — from model/API integration to deployment, monitoring, and iteration.

CORE SKILLS

AI & ML: LLMs, LangChain, RAG, AI Agents, NLP, Embeddings, Prompt Engineering, TensorFlow, PyTorch, scikit-learn, Pandas, NumPy

Full Stack: Next.js, React, React Native, TypeScript, Node.js, FastAPI, Django, Flask, Flutter, Convex, RESTful APIs, GraphQL, WebSockets

Programming: Python, JavaScript, TypeScript, Java, C++, C#, PHP, SQL

Databases & Data: PostgreSQL, MySQL, MongoDB, DynamoDB, SQLite, Prisma, vector/search-ready data modeling

Cloud & DevOps: AWS (EC2, S3, RDS, CloudFront, Route 53), Docker, CI/CD, GitHub Actions, Vercel, Railway, Firebase, Google Cloud

Automation & Tools: n8n workflow automation, Git/GitHub/Bitbucket, Streamlit, Jupyter, Power BI

Architecture: Clean Architecture, MVVM, Bloc, Provider, scalable API design, production troubleshooting

PROFESSIONAL EXPERIENCE

Freelance Developer | Singapore

February 2026 – Present | Remote

Designed and shipped full-stack registration platforms for corporate events (500+ attendees), with secure auth, data capture, and reliable peak-load delivery.

Owned the product lifecycle end-to-end — requirements, API/frontend development, cloud deployment, and ongoing iteration for enterprise clients.

Deployed and operated applications on AWS with a focus on reliability, security, and availability under live event traffic.

Configured hosting, DNS, and domain setup so client event sites stayed live through peak registration windows.

Delivered production systems for clients including Infineon, UOB, and Siemens.

Flutter Developer | Timeworld (Singapore)

December 2024 – November 2025 | Remote

Owned the full delivery lifecycle as the sole full-time developer — build, test, release, and iterate production mobile features.

Implemented Bloc architecture and clean state management for maintainable, scalable cross-platform releases.

Built deep-linking and release-ready features for production app distribution across platforms.

Optimized performance and localized the app across five languages for global user reach.

Partnered on release readiness, production bug fixes, and stable updates for end users.

Full Stack Developer | Pixora Lab

June 2024 – January 2025 | Remote

Built and maintained full-stack web applications across frontend, backend APIs, and databases with a product-first delivery mindset.

Designed and integrated RESTful APIs and third-party services to power data-driven product features.

Deployed and operated applications on AWS (EC2, S3, RDS, CloudFront, Route 53) for scalable production workloads.

Implemented CI/CD pipelines, monitored application health, and troubleshoot production incidents end-to-end.

Hardened security, scalability, and reliability while collaborating with cross-functional product teams.

Frontend Developer | Mom&Pop (Thailand)

December 2023 – February 2024 | Remote

Collaborated with a five-person team to ship customer and shop-owner mobile apps with responsive, production-ready UX.

Integrated IoT peripherals (printers, Bluetooth printers, scanners), enabling higher real-world adoption in retail settings.

Partnered with the field team to diagnose device-specific production bugs and ship stable fixes.

Freelance Developer | Upwork

June 2023 – June 2024

Delivered a full-stack project from scratch for a US-based client — setup, feature development, and handoff.

Implemented Provider-based state management and integrated backend APIs for reliable client-server data flow.

Developed backend components in C# and supported end-to-end feature delivery across the stack.

EDUCATION

Bachelor's Degree in Data Science | University of Hertfordshire, Singapore

January 2025 – April 2026

Graduated with First Class Honors, GPA 3.98 out of 4.5

Diploma in Info Communication | PSB Academy, Singapore

April 2024 – December 2025

Covered Python, OOP, networking fundamentals, and cybersecurity basics.
Awarded Top Student out of 80 students in the class.

Diploma in Computing I NCC Education (UK)

January 2022 – August 2024

Graduated with GPA 4.0 out of 5.0.

Built a PHP website as the final project; founded and managed the school football club.

PROJECTS

Cross-Platform Fashion Ecommerce (In Progress)

React Native, Convex, Realtime Database | Android, iOS, Web | June 2026 – Present

Building a cross-platform ecommerce app with React Native for Android, iOS, and web, using Convex as the realtime backend and database.

Implementing core shop flows (catalog, cart, checkout) plus direct messaging between shoppers and clothing stores.

Developing brand-owner dashboards for order tracking, storefront analytics, and other standard ecommerce operations.

AI Costudy Pilot (Full-Stack AI Web App)

Next.js, TypeScript, PostgreSQL, Prisma, AWS RDS, S3, Vercel, Railway | LLM PDF Q&A, summaries, quizzes

Built a full-stack AI study platform with PDF AI summaries, semantic Q&A, and quiz generation using Next.js, TypeScript, and PostgreSQL/Prisma.

Provisioned cloud storage and data layer with user-level access control on AWS RDS and S3 for document-backed AI features.

Added secure auth, profile management, and feature gating with API key revoke support for controlled AI usage.

Deployed frontend on Vercel and backend on Railway; resolved CORS, auth sessions, and production build failures.

GitHub Issue Analysis & AI Workflow Automation

n8n, LangChain, LLMs, Docker, Railway

Automated issue intake, LLM-powered analysis, and email notification with n8n + LangChain workflows.

Containerized and deployed the AI workflow backend on Railway with Docker for reliable, repeatable releases.

Reduced manual triage time for internal engineering workflows through agent-style automation.

AI Resume Screening & Ranking (HR)

Python, FastAPI, Flutter, NLP Embeddings, Semantic Similarity

Built an end-to-end AI screening system with a FastAPI backend and Flutter frontend for HR evaluation workflows.

Ranked candidates via embedding-based semantic similarity (beyond keyword matching) with explainable match signals.

Deployed API and UI as a working full-stack AI service for production-style HR screening.

Computer Vision Models Performance Research

VGGFace2, CNN, ResNet50 | Singapore | December 2025 – April 2026

Benchmarked computer vision models under varied parameters and sample sizes on the VGGFace2 dataset.

Built a baseline CNN and compared it against ResNet50 transfer learning for face-related CV performance.
